*Performance*  
*Objectives*

2012

## *Introduction*

This booklet contains the performance objectives for Ross 308 Broiler and is to be used with the Ross Broiler Management Manual.

## *Performance*

These objectives indicate the performance achievable under good management and environmental conditions and when feeding nutrient levels described in the Ross 308 Broiler Nutrition Specification.

Producers may find that local factors prevent such performance being achieved. For example:

- The availability of raw materials may limit nutrient content and intake.
- Extreme climatic conditions will reduce performance.
- Economic considerations may limit choice of production systems.

Therefore average performance may be lower.

The objectives are presented in two sections to reflect the global nature of the publication. Section *g* contains the performance data in metric measurement and Section *lb* contains imperial measurements.

In the tables values are rounded, this may result in small inaccuracies when using the objectives to calculate other performance statistics.

Yields will vary between processing plants depending on type of equipment used (e.g. carcass chilling technology, automated versus manual de-boning) and the exact portion being produced.

For further information on the management of Ross stock, please contact your local Technical Service Manager or the Technical Service Department.

## Contents

04		<i>Key Management Points</i>
06-07	Section <b>g</b>	<i>As-Hatched Performance</i>
08-09	Section <b>g</b>	<i>Male Performance</i>
10-11	Section <b>g</b>	<i>Female Performance</i>
14-15	Section <b>lb</b>	<i>As-Hatched Performance</i>
16-17	Section <b>lb</b>	<i>Male Performance</i>
18-19	Section <b>lb</b>	<i>Female Performance</i>
20-21		<i>Carcass Yield</i>

### *Key Management Points*

The Ross 308 is a robust, fast growing, feed efficient broiler with good meat yield. It is designed to satisfy the demands of customers who require consistency of performance and the versatility to meet a broad range of end product requirements. Cost effective production of chicken meat depends on achieving good bird performance and the following points are important for optimizing performance of the Ross 308 broiler:

- Maximize chick quality by good management of hatching, storage and transport conditions.
- Design the brooding set-up to ensure easy access to water and feed at placement and to ease the transition between supplementary systems and the automated feeders and drinkers at 4-5 days. Feed a highly digestible and nutritionally balanced Starter diet.
- Keep chicks in their thermal comfort zone by monitoring chick behavior, but beware of low relative humidities (less than 50% RH). Establish a minimum ventilation program from day one.
- Monitor crop fill, feeding and drinking behavior and 7-day live weight to allow continuous improvement of the brooding set-up.
- Keep birds in their thermal comfort zone throughout the growing period. Fast growing broilers produce large amounts of heat, particularly in the second half of the growout period. Keeping ambient temperatures less than 21°C (69.8°F) from 21 days onwards may improve growth rates.
- Maintain high standards of biosecurity and cleanliness to keep disease to a minimum.

## NOTES

<sup>1</sup>On-farm body weight (i.e. feed present in intestinal tract)<sup>2</sup>Feed consumption per living bird<sup>3</sup>FCR includes initial body weight at placement and does not account for mortality

In the table values are rounded, this may result in small inaccuracies when using the objectives to calculate other performance statistics.

# ROSS 308 BROILER: Performance Objectives

## Carcass Yield

The following diagrams indicate how yields of the major portions change with increasing live weight in each sex. Two types of processing are described: eviscerated yield is broken down into breast meat, thigh and drumstick to represent a portioning operation and into breast meat and leg meat to represent a deboning operation.

**ROSS 308 Male - Portion**

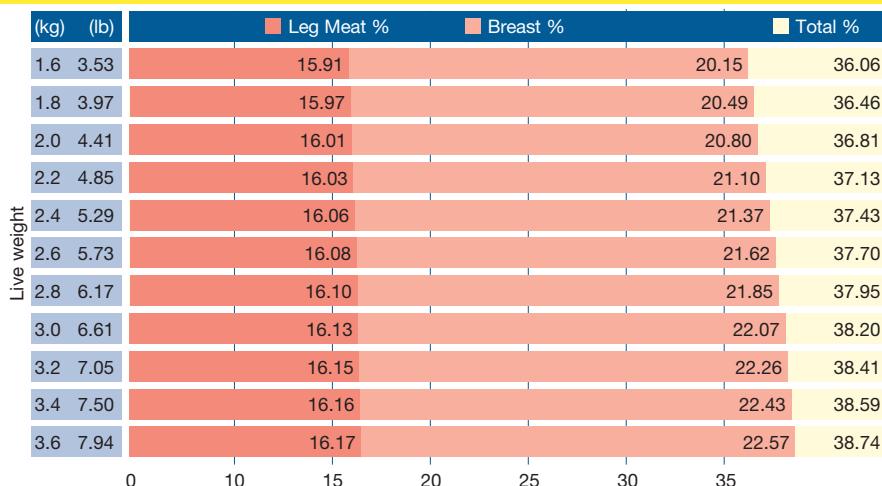

**ROSS 308 Female - Portion**

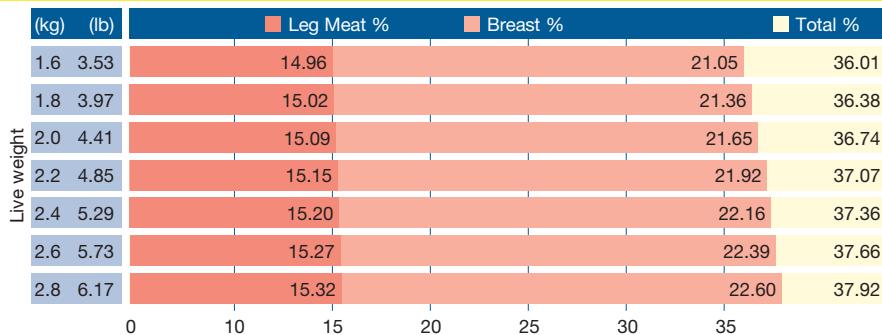

## ROSS 308 BROILER: Performance Objectives

ROSS 308 Male - Debone

ROSS 308 Female - Debone

### Definitions of terms:

Eviscerated %	eviscerated carcass (without neck, abdominal fat and internal organs) as a percentage of live weight.
Breast %	breast meat (without skin and bone removed) as a percentage of live weight.
Thigh/Drumstick %	whole thigh/drumstick (with skin and bone in) as a percentage of live weight.
Leg Meat %	sum of deboned thigh (without skin) and deboned drumstick (without skin) as a percentage of live weight.

*NOTE: These figures represent dry yield. They do not include any moisture retained during chilling or processing. Carcass component yields will vary among processing plants depending on, for example, type of equipment used and the exact portion(s) being produced.*
